

# Built to Perform

## High Performance Shark EFB Series

## WHO WE ARE

At StratoJet, our mission is to build and provide the very best solutions you will use for years, to make and save money. We invest our resources into building rock solid hardware and continually developing cutting-edge automation instead of advertising.

StratoJet is a Boutique Manufacturing Brand, creating hand built super structures using the world's most reliable components and loaded with our automated features; not plastic printers on an assembly line.

2400|dpi

## QUALITY WITH TECHNOLOGY

With 2400 dpi high definition output Shark EFB-2512 uses grayscale technology to ensure prints have a smooth gradation in skin tones as well as sharp and well saturated solids and text.

Stratojet incorporates Accurate Dot Placement Technology (ADPT). The ADPT integrates the printer controller system for color management software to assign a specific drop size along the print, allowing the user to print sharp text and vibrant colors with speed.

### VARNISH / CLEAR (OPTION)

Increase your profit margin by providing high value options like spot varnish coating to highlight specific features on the print, or use complete varnish coat to increase print color protection from harsh external conditions. Also get the option to add a matte or a gloss varnish affect to your prints.

## WHITE INK (OPTION)

Shark EFB-2512 offers white ink option allowing you to expand your printing applications using the white ink system to print, under-flood, over-flood or use the spot feature on transparent, translucent or colored materials. The EFB-2512 circulation system recirculates the white ink, to prevent ink particles from settling.

## White Ink Parking System

Turn the White Ink on or off with just a button and not worry about ruining print heads. When you need the White again in 2 hours, 2 days or 2 weeks, just hit the button, and you're printing White.

# Be the most Versatile

### **Innovative and Robust**

To increase reliability, StratoJet uses high-end Servo motors instead of using significantly inexpensive and low consistency DC motors. To ensure fidelity across the print image, particularly when working on tiled applications. StratoJet chooses to use an ink delivery system that 'pulls' the ink with vacuum, instead of the much less efficient positive pressure system, all other printers use. Ever heard of Inks drying in the Heads...?

### **Remote Tech**

We use the highest quality components in our printers and designed ground up with serviceability in mind. If there's an issue, with a password, we log into your printer remotely, then read, evaluate log files and fix issues remotely; yes, remotely! We found the most of service calls are not due to hardware issues.

Stratojet starts by training our technicians to be application experts before they become a hardware technician.

### **More for Less**

Our LED lamps have exceptional long life and low-power consumption. The lamps don't need to warm up and instantly cures the ink, while generating low heat, to allow more print applications that are heat sensitive. Depending on the media or printing environment, static can cause quality issues. To minimize this, an anti-static bar is built into the printer carriage.
